

Launching the database:

First: click start lab button, then click AWS after it's green.

Click the database on the left side and go to security groups and edit inbound rules, Modify the rule by clicking using "my IP" and then pgAdmin can connect to the server.

Second: open pgAdmin and type in username and password set in advance on AWS service, done!

Creating the new tables:

First: click schema → tables and right click create table, then go to the column tab to key in the titles of all the columns and specify all the types for the two tables as below:

Columns									
	Name	Data type	Length/Precision	Scale	Not NULL?	Primary key?	Default		
	FIPS	character varying   v	5		<input type="checkbox"/>	<input type="checkbox"/>			
	Admin2	character varying   v	100		<input type="checkbox"/>	<input type="checkbox"/>			
	Province_State	character varying   v	100		<input type="checkbox"/>	<input type="checkbox"/>			
	Country_Region	character varying   v	40		<input type="checkbox"/>	<input type="checkbox"/>			
	Last_Update	timestamp without time...   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Lat_	double precision   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Long_	double precision   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Confirmed	integer   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Deaths	integer   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Recovered	integer   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Active	integer   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Combined_Key	character varying   v			<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>			
	Incident_Rate	double precision   v			<input type="checkbox"/>	<input type="checkbox"/>			
	Case_Fatality_Ratio	double precision   v			<input type="checkbox"/>	<input type="checkbox"/>			

(Combined\_Key is set to be the primary key)

Then right click import data and choose the csv file, turn on the header option and choose the comma as the delimiter.

Tables created!

And then we can type SQL queries

In the 'SQL' tag now.

Import/Export data - table 'March22'

Options Columns

Import/Export ☒ Import Export

File Info

Filename C:\Users\borac\Desktop\school\selective\_course\Database\_Systems'

Format csv

Encoding Select an item...

Miscellaneous

OID ☐

Header ☒

Delimiter ,

Specifies the character that separates columns within each row (line) of the file. The default is a tab character in text format, a comma in CSV format. This must be a single one-byte character. This option is not

Close Reset OK

Queries & results:

a.

```
1 select sum("Confirmed")
2 from (select *
3       from "March22"
4       union
5       select *
6       from "March23"
7     ) as tmp
8 where ("Province_State" = 'Kansas' and Date("Last_Update") = '2022-03-24')
```

	sum bigint
1	770314

b.

```
1 select "Country_Region"
2 from (select "Country_Region", "Last_Update", sum("Confirmed")
3       from "March22"
4       group by "Country_Region", "Last_Update"
5       union
6       select "Country_Region", "Last_Update", sum("Confirmed")
7       from "March23"
8       group by "Country_Region", "Last_Update"
9     ) as tmp
10 where(sum > 1000000 and Date("Last_Update") = '2022-03-24')
```
