Handbook and Manual pages

- Official guide and be found at
 - https://www.freebsd.org/doc/en/books/handbook/configtuningcron.html
 - https://www.freebsd.org/doc/zh_TW/books/handbook/configtuningcron.html

CRON – Schedule Commands (1)

- What we want?
 - Do things at right time automatically
- cron daemon
 - The daemon that handles periodic execution
 - cron daemon reads configuration file and executes commands on time

CRON – Schedule Commands (2)

- Configuration file
 - So called: crontab (cron table)
 - Location of user cron configuration file
 - Every user can have at most one crontab file and this file will be named the user's login ID
 - Edit using crontab(1) command

System	Cron Dir
FreeBSD	/var/cron/tabs
Red Hat	/var/spool/cron
Solaris	/var/spool/cron/crontabs
SunOS	/var/spool/cron/crontabs

- Location of System Cron Configuration file
 - /etc/crontab

CRON – Schedule Commands (3)

- Configuration File Format
 - Ignored
 - Blank lines or leading spaces and tabs
 - Comments
 - pound-sign lines whose first non-space character is a #
 - environment setting
 - \blacksquare name = value
 - Default environment variables
 - LOGNAME, SHELL, PATH, HOME, MAILTO

```
SHELL=/bin/sh
PATH=/etc:/bin:/sbin:/usr/bin:/usr/sbin:/usr/local/bin
```

cron command example:

CRON – Schedule Commands (4)

• cron command format – minute hour day month weekday command

Field	Description	Range
minute	Minute of the hour	0 ~ 59
hour	Hour of the day	$0 \sim 23$
day	Day of the month	1 ~ 31
month	Month of the year	1 ~ 12
weekday	Day of the week	$0 \sim 6 \ (0 = \text{Sunday})$

Rule Matching

- * matches everything
- Single character matches exactly
- Dash(-) matches range
- Comma(,) matches any listed value
- Slash(/) matches skips of the number's value through the range.

CRON – Schedule Commands (5)

crontab time format example

```
45
                    1-5 \rightarrow AM 10:45, from Mon. to Fri.
      10
10
                        \rightarrow On the 10th minute of each hour
*/3
                       \rightarrow Every three minutes
                                                    periodic e.g., 1-59/2 = 1, 3, 5, 7, 9, ..., 59
     15 5
30
                       \rightarrow PM 3:30 of each 5th day
         14 2 * \rightarrow On the Midnight of Valentine's day
           * * * On the 5th minute, from 0 to 6 o'clock
     0-6
0,30
                    5
                        → Every half-hour on Fri. and the 13th day
```

crontab example

```
20 1 * * * find /tmp -atime +3 -exec rm -f {} ';'
55 23 * * 0-3,6 /home/tsaimh/cputemp-check.sh
```

CRON – Schedule Commands (6)

• Special strings to specify the time

string	meaning	in 5 fields format
@reboot	Run once, at startup.	N/A
@yearly	Run once a year	0 0 1 1 *
@annually	(same as @yearly)	
@monthly	Run once a month	0 0 1 * *
@weekly	Run once a week	0 0 * * 0
@daily	Run once a day	00***
@midnight	(same as @daily)	
@hourly	Run once an hour	0 * * * *
@every_minute	Run once a minute	*/1 * * * *
@every_second	Run once a second	

crontab command

• crontab(1)

- \$ crontab -e [-u user]
 - Edit the [user's] crontab using editor
- \$ crontab -1
 - List the content of the crontab
- \$ crontab -r
 - Remove the current crontab
- \$ crontab *filename*
 - Install *filename* as your crontab

crontab management (1)

- To Allow or deny user from using cron daemon
 - o By default, all users can have their own crontab
 - o allow file
 - A list of users that may use crontab, any other not in the list can not use it
 - deny file
 - Reverse meaning
- log

System	Allow or deny file	Log file
FreeBSD	/var/cron/{allow,deny}	By syslogd
Red Hat	/etc/cron. {allow,deny}	/var/log/cron
Solaris	/etc/cron.d/cron. {allow,deny}	/var/cron/log
SunOS	/var/spool/cron/cron. {allow,deny}	By syslogd

System crontab: /etc/crontab

- System crontab
 - o /etc/crontab

```
SHELL=/bin/sh
PATH=/etc:/bin:/sbin:/usr/bin:/usr/sbin
HOME=/var/log
#minute hour mday month wday /
                                        command
*/5
                                root
                                        /usr/libexec/atrun
*/11
                                operator /usr/libexec/save-entropy
                                root
                                        newsyslog
                                        periodic daily 2
                                root
                                        periodic weekly
                                root
                                        periodic monthly
                                root
                                        adjkerntz -a
1,31
                                root/
```

periodic utility (1)

- periodic(8)
 - Run periodic system function under /etc/periodic

```
$ ls -ld /etc/periodic/*
drwxr-xr-x 2 root wheel 1024 Sep 26 21:43 /etc/periodic/daily
drwxr-xr-x 2 root wheel 512 Sep 27 03:49 /etc/periodic/monthly
drwxr-xr-x 2 root wheel 512 Sep 27 03:49 /etc/periodic/security
drwxr-xr-x 2 root wheel 512 Sep 27 03:49 /etc/periodic/weekly
```

```
$ ls /etc/periodic/daily
100.clean-disks
                    200.backup-passwd
                                         405.status-ata-raid 430.status-rwho
110.clean-tmps
                    210.backup-aliases
                                         406.status-gmirror
                                                              440.status-mailq
                    300.calendar
120.clean-preserve
                                         407.status-graid3
                                                              450.status-security
130.clean-msgs
                     310.accounting
                                         408.status-gstripe
                                                              470.status-named
140.clean-rwho
                     330. news
                                         409.status-gconcat
                                                              500.queuerun
150.clean-hoststat 400.status-disks
                                         420.status-network
                                                              999.local
```

- periodic utility
 - O /etc/periodic.conf
 - O /etc/defaults/periodic.conf

```
$ ls -al /usr/local/etc/periodic/security
total 18
drwxr-xr-x 2 root wheel 4 Apr 12 2017 .
drwxr-xr-x 8 root wheel 8 Aug 20 2016 ..
-r-xr-xr-x 1 root wheel 4944 Apr 2 2017 410.pkg-audit
-r-xr-xr-x 1 root wheel 1686 Apr 2 2017 460.pkg-checksum
```

periodic utility (2)

• For custom system programs: /usr/local/etc/periodic

```
$ ls -l /usr/local/etc/periodic/
total 19
drwxr-xr-x 2 root wheel 6 Apr 12 2017 daily
drwxr-xr-x 2 root wheel 4 Aug 20 2016 hourly
drwxr-xr-x 2 root wheel 4 Aug 20 2016 monthly
drwxr-xr-x 2 root wheel 3 Aug 20 2016 reboot
drwxr-xr-x 2 root wheel 4 Apr 12 2017 security
drwxr-xr-x 2 root wheel 6 Apr 12 2017 weekly
```

```
$ ls -l /usr/local/etc/periodic/daily/
total 18
-r-xr-xr-x 1 root wheel 1512 Jul 29 2016 402.zfSnap
-r-xr-xr-x 1 root wheel 1073 Jul 29 2016 403.zfSnap_delete
-r-xr-xr-x 1 root wheel 2746 Apr 2 2017 411.pkg-backup
-r-xr-xr-x 1 root wheel 2506 Apr 2 2017 490.status-pkg-changes
```

periodic utility (3)

- Execution order depends on filenames
 - Use number as prefix to control the order
- All scripts under that directory will be executed
 - Unlike /etc/rc.conf
 - Even though there is no "YES" in /etc/periodic.conf
- /etc/periodic.conf

```
$ cat /etc/periodic.conf
daily_clean_tmps_enable="YES"  # Delete stuff daily
daily_clean_tmps_dirs="/tmp /var/tmp"  # Delete under here
daily_clean_tmps_days="3"  # If not accessed for
daily_status_zfs_enable="YES"  # Check ZFS
daily_status_ntpd_enable="YES"  # Check NTP status
weekly_dehydrated_enable="YES"  # Check NTP status
```

Driven by crontab(1)

at command

- <u>at(1)</u>
 - executes commands at a <u>specified time</u>
 at [-q queue] [-f file] [-mldbv] time
 or at [-q queue] [-f file] [-mldbv] -t [[CC]YY]MMDDhhmm[.SS]
- at management
 - o atq: View job queue
 - o atrm: Remove jobs
 - o /var/at/at.{allow,deny}
 - By default, only root can execute "at" command
- Driven by crontab(1)
 - Invoked every 5 minutes
